PERSONAL PROJECTS

BuxoroUz Web Site local site
- https://github.com/TumanlarWebSayt/JondorTuman this is git hub link This program is a site made for the Bukhara regional government. This site only works locally Technologies: Django,Django Rest Framework, Postgresql, Django Manager and Queryset, Pycopg2

SmartEducation CRM Platform
- https://github.com/MyHackerCode/Tegma this is git hub link So,it is a program that automates course centers and enterprises that improve the quality of education. In this, I will keep track of students' attendance, test results, attendance, some documents confirming the identity of the students, and always sending sms to their parents, attendance, test results. Technologies: Django,Django Rest Framework, Postgresql, Django Manager and Queryset, Pycopg2

Freelance Work
- https://github.com/MyHackerCode/New_work_1 this is git hub link in this program, I made a program that adds to the database which products to buy in the store admin when placing orders through the Telegram bot. Technologies: Django,Django Rest Framework, Postgresql, Django Manager and Queryset, Pycopg2

Automation of drug warehouse
- Since I don't have customer server accounts, I'm showing the code from my githubs. they are deployed by other people. and publish our program on github, but I have a demo of it, and through this program, you can find out how many products are in the warehouse of the pharmacy and how many products are sold per day, week, month. and generates a separate barcode for each medicine box for barcode scanning. Technologies: Django,Django Rest Framework, Postgresql, Django Manager and Queryset, Pycopg2

EduPlus CRM platform
- https://github.com/It-park-projects/Education this is git hub link So,it is a program that automates course centers and enterprises that improve the quality of education. In this, I will keep track of students' attendance, test results, attendance, some documents confirming the identity of the students, and always sending sms to their parents, attendance, test results.

Django Click Integration
- https://github.com/BobojonovSobir0576/DjangoRestAPI-Click-Integration this is git hub link Click is Uzbekistan payment service.I were integrate this payment service by site and i made payment with this my code.The main goal of project,Click payment with their card.Technologies:Django,Django Rest Framework, Postgresql,Django Manager and Queryset, Pycopg2,dotenv, infobip-api-python-client,pyclick,

Cashblack CRM paltform
- https://github.com/It-park-projects/Cashback this is git hub link So,In this program, I made the backend and gave the APIs to the Flutter developer. The purpose of this program is to deliver cashback to each customer's account for using each store. when their cashback is full, they can easily buy from their cashback account without paying.

Django Sms Integration
- https://github.com/BobojonovSobir0576/Python-SMS-Integrations this is git hub link This is an integration made for payments through SMS integration,for some services,for sending SMS for communication.Here are 3 good companies to receive sms on contract with sms messengers.
